

# An introduction to uCheck's API solutions

Streamline and simplify your vetting and screening processes by utilising uCheck's integrated solutions.

- Enable the power of uCheck's vetting and screening solutions directly from within your own systems
- Varying levels of integrations to suit your requirements
- uCheck's API is based on modern REST API standards for easy integration

## Current Integrations

# Add Applicant Request API

## What is the process?

You provide the applicant's forename, surname and email address via the API and we will automatically email the applicant prompting them to submit their information into the uCheck HR Platform.

Once the applicant information has been supplied, your user/s will need to complete all required stages on the uCheck HR Platform.

## What products can I request?

DBS Standard and Enhanced

Basic Criminal Record Check

Right to Work

Identity Check

Adverse Credit History

## What are the benefits?

- You no longer need to visit the HR Platform to start the vetting and screening process
- You no longer need to 're-key' data that is stored in an external system
- You have a more streamlined process whilst still benefitting from the additional features of the uCheck HR Platform

# Add Applicant API

## What is the process?

You provide all of the applicant information that would usually be submitted via the data capture screens. Once accepted by the API the application will be created in the uCheck HR Platform awaiting further action.

The data submitted must comply with business logic outlined in the formal specification to avoid any delays (for example - 5 years concurrent address history).

## What products can I request?

DBS Standard and Enhanced

Basic Criminal Record Check

Right to Work

## What are the benefits?

- You no longer need to 're-key' data that is stored in an external system
- You can save time by submitting all applicant information via one system
- You can be assured that all subsequent actions (Section Y and/or ID check) are completed on the uCheck HR Platform, benefitting from guidance, logic and auditing
- You have a more streamlined process whilst still benefitting from the additional features of the uCheck HR Platform

You are required to collect consent from the applicant prior to submission via the API. This must comply with UK GDPR, DBS, our Terms and Conditions and any other statutory regulations you are bound by.

# Add Application API

## What is the process?

You provide the full application data to uCheck without the need to interact with the HR Platform.

You will be responsible for completion of any required stages in line with Government and DBS legislation (for example - Section Y and ID check in the case of an Enhanced or Standard DBS Disclosure).

## What products can I request?

DBS Standard and Enhanced

Basic Criminal Record Check

## What are the benefits?

- You can submit an application without the need to access the uCheck HR Platform
- You no longer need to 're-key' data that is stored in an external system
- You have complete control of the application process

You are required to collect consent from the applicant prior to submission via the API. This must comply with UK GDPR, DBS, our Terms and Conditions and any other statutory regulations you are bound by.

You are required to ensure any ID check is in line with the most up to date Government and DBS legislation.

# Get Results API

## What is the process?

You have the option to request applicant result/s for a specified date. Any results received on that date are sent back to your system via the Get Results API.

### What products can I request?

DBS Standard and Enhanced

Basic Criminal Record Check

Right to Work

### What are the benefits?

- You can utilise this alongside our Add Applicant Request, Add Applicant and Add Application API
- You no longer need to visit the HR Platform to view applicant results
- You will receive all applicant results in bulk regardless of volume
- You aren't required to return a flag confirming you have received the results

This API must be used alongside the Add Applicant Request, Add Applicant or Add Application API.

# Get Results Report

## What is the process?

Used in line with the Get Results API, Get Results Report will pull the uCheck summary report from the uCheck HR Platform and send this back to your system via our API.

### What products can I request?

DBS Standard and Enhanced

Basic Criminal Record Check

Right to Work

### What are the benefits?

- Bolt this on to the Get Results API
- Get the uCheck summary report without having to sign into the uCheck Platform
- Further streamline your vetting and screening processes

This API must be used alongside the Add Applicant Request, Add Applicant or Add Application API.

# API implementation flow

In depth **discussion** regarding requirements and preferred choice of API

Formal API specification sent to you upon receipt of a signed **Non-Disclosure Agreement** (NDA)

Contract and commercials agreed prior to commencement of **testing**

**Review phase** - uCheck expect an error free XML sample prior to entering a formal testing phase

**Testing phase** - uCheck expect a minimum of ten error free end-to-end submissions via the Sandbox environment

API **Go Live**

## When should I considering using the API?

When you have a need to develop a vetting system with a different user interface to the uCheck system. If you just want a branded version of uCheck then our white labelling option is a better choice. The API is a potential choice for anyone running more than 1,500 DBS checks per year.

## What do I need to use the API?

Your development IT team need to be able to work with **RESTful interfaces** and have a good understanding of web-related technologies.
